Signature of the Bidder with seal

Annexure

Project Overview & Scope of Work

This proposal outlines the resurfacing and top coating of 1,000 sq. m. of deteriorated bituminous road within the ICMR-NIV Pune campus. The primary objective is to seal surface cracks, rectify minor unevenness, and provide a fresh wearing course.

- Site Inspection & Marking: Surveying the stretch to identify potholes, depressions, and edge breakages.
- Surface Preparation: Thorough cleaning of the road surface using mechanical wire brushes and compressed air to remove dust, loose debris, and vegetation.
- Patchwork & Pothole Repairs: Filling deep potholes and rutted areas with dense bituminous macadam or premix patch material prior to top coating.
- Tack Coat Application: Spraying a uniform layer of bituminous emulsion (RS-1) to ensure strong bonding between the old surface and the new top layer.
- Wearing Course & Seal Coat: Laying a 20 mm Open-Graded Premix Carpet followed by a Type-B Premixed Seal Coat as per MoRTH guidelines.
- Compacting & Finishing: Rolling using an 8–10 tonne tandem smooth-wheeled roller to achieve proper compaction and surface texture.

Technical Specifications & Material Standards

All materials and execution practices will comply with MoRTH Specifications and relevant IRC (Indian Roads Congress) standards:

- Binder: Paving bitumen (VG-30) or Rapid-Setting Bituminous Emulsion (RS-1 for tack coat; paving grade/emulsion for premix).
- Coarse Aggregates: Clean, hard, angular, crushed stone chips free from dust and flaky particles.
- Fine Aggregates: Clean crushed stone dust, grit, or sand for the seal coat layer.
- Laying Temperatures: Heating and laying temperatures strictly maintained within specified operational ranges (121°C to 163°C for hot-mix applications).
